PEP 723 – Inline script metadata

```
● ● ●  
  
# /// script  
# dependencies = [  
#     "requests<3",  
#     "rich",  
# ]  
# requires-python = "≥3.11"  
# ///  
  
import requests  
from rich.pretty import pprint  
  
resp = requests.get("https://peps.python.org/api/peps.json")  
data = resp.json()  
pprint([(k, v["title"]) for k, v in data.items()][:10])
```

PEP 723 – Fields

- ***dependencies*** - Each entry must be a valid PEP-508 dependency
- ***requires-python***
 - specifies the Python version(s) with which the script is compatible with
 - the value must be a valid version specifier (PEP-440)
 - Tools that support managing different versions of Python should attempt to use the highest available version of Python that is compatible with the script's requires-python metadata
- ***[tool]* table** - Tool-specific configuration applied when running the script (PEP-518)

PEP 723 – Tooling

Script runner	Run command	Manages Python
uv	<code>uv run script.py</code>	Yes
hatch	<code>hatch run script.py</code>	Yes
pipx	<code>pipx run script.py</code>	No
pdm	<code>pdm run script.py</code>	No

Running scripts

Charlie Marsh ✓

@charliermarsh

We got tired of calling PEP 723 scripts (the self-contained Python files with embedded dependency metadata) "PEP 723 scripts"

We're now calling them 📜 "scrolls" 📜

Behold, a Python scroll

```
1 # /// script
2 # dependencies = [
3 #   "requests<3",
4 #   "rich",
5 # ]
6 # ///
7
8 import requests
9 from rich.pretty import pprint
10
11 resp = requests.get("https://peps.python.org/api/peps.json")
12 data = resp.json()
13 pprint([(k, v["title"]) for k, v in data.items()][:10])
```
